

APPARATUS AND METHOD FOR LOADING DATA STORAGE DEVICES INTO CARRIERS

Abstract

An apparatus and method are provided that are operable to install data storage devices such as CDs and DVDs each into a respective carrier. The data storage devices are placed in respective recesses in the respective carriers by providing an open pocket into which the data storage devices may move under the influence of gravity when the data storage device is close to the recess within a respective carrier. A securement device is provided to secure the data storage device within a respective carrier recess.
